Aseptic Packaging Equipment refers to a packaging equipment where the packaged items are sterilized for a short time before packaging, and then filled and sealed in an aseptic environment (the packaging, the packaging, and packaging auxiliary equipment are sterile).

Aseptic packaging has the following advantages: the food is sterilized in a short period of high temperature without destroying its nutritional components, which can keep the nutritional components of the food intact; composite packaging materials and vacuum conditions can protect the product from light, gas, and odor The influence and the invasion of microorganisms eliminate the need to add preservatives to the food, and do not require refrigeration during the transportation and storage of the product; the shelf life of the product is extended at normal temperature.
