The global Asparaginase for Injection market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Asparaginase for Injection is a medication used primarily in the treatment of acute lymphoblastic leukemia (ALL). It is an enzyme that catalyzes the hydrolysis of the amino acid asparagine into aspartic acid and ammonia, effectively depleting the levels of asparagine in the blood. Cancer cells, particularly lymphoblastic leukemia cells, are unable to synthesize asparagine and rely on an external supply. By depleting asparagine, asparaginase inhibits the growth and proliferation of these cancer cells.
