The global Aspergillus Fumigatus ELISA Kit market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Aspergillus fumigatus ELISA kit is designed for the qualitative determination of antibodies against Aspergillus fumigatus in human serum or plasma (citrate, heparin). Aspergillus fumigatus is a fungus of the genus Aspergillus and is one of the most common Aspergillus species to cause disease in individuals with an immunodeficiency. A. fumigatus, a saprotroph, is widespread in nature and is typically found in soil and decaying organic matter. Colonies of the fungus produce thousands of small conidia that readily become airborne. The fungus is capable of growth at temperatures up to 50 °C, with conidia surviving at 70 °C. Humans are continuously in contact with these asexual spores and it is estimated that an individual inhales several hundred conidia each day; typically, these are quickly eliminated by the immune system. Aspergillosis develops mainly in individuals who are immunocompromised, either from disease or from immunosuppressive drugs, and is a leading cause of death in acute leukemia and hematopoietic stem cell transplantation.

United States market for Aspergillus Fumigatus ELISA Kit is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
