The global Aspergillus Oryzae market size is predicted to grow from US\$ 56.74 million in 2025 to US\$ 94.95 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Aspergillus oryzae is a food-grade filamentous fungal strain primarily used in the production of koji, brewing fermentation, food enzyme production, and industrial microbial expression. Commercially traded forms include Aspergillus oryzae strains, starter cultures, and engineered strains under license, available as powdered or granular starter cultures, research reference strains, industrial production strains, and custom expression hosts. The estimated overall gross margin is approximately 52%.

The market for aspergillus oryzae itself is relatively small but stable, with strong repeat purchase characteristics. Core demand comes from traditional fermented food producers such as soy sauce, miso, sake, vinegar, and fermented soybean products, which require continuous procurement of starter cultures and production strains. Competition is not solely based on strain price; buyers focus on spore viability, fermentation speed, enzyme activity profile, contamination control, flavor consistency, and batch-to-batch reproducibility. Consequently, established starter culture suppliers and those capable of strain preservation can command a higher technical premium.

Market growth is driven along two main lines: first, the expansion of Asian fermented foods into overseas restaurants, condiments, and plant-based flavor development, which increases demand for professional starter cultures and standardized fermentation solutions; second, the use of aspergillus oryzae as an industrial host for proteases, amylases, lipases, food ingredient production, and recombinant protein expression. Compared to conventional starter cultures, engineered strains, expression platforms, and strain licensing command higher unit prices, though many industrial strains are used internally by large food or enzyme companies, limiting the publicly tradable

market.

Short-term market growth is unlikely to see a large-scale surge, but the value of highly stable starter cultures and engineered *Aspergillus oryzae* strains is expected to continue rising, driven by the overseas expansion of Asian fermented foods, clean-label flavor development, and expansion of precision fermentation host applications.
