The global Asphalt Adhesion Promoter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Asphalt adhesion promoter is a type of material used in road construction and pavement maintenance to enhance the bonding between asphalt layers. It is applied to the surface of an existing asphalt layer before a new layer is added. The main purpose of using an asphalt adhesion promoter is to improve the adhesion and bond between the old and new asphalt layers, ensuring the structural integrity and longevity of the pavement.

The global market for asphalt adhesion promoters plays a critical role in enhancing the durability and performance of road infrastructure. These promoters improve the bond between asphalt layers, reducing the risk of delamination and extending the lifespan of pavement. As countries continue to invest in transportation infrastructure and seek sustainable solutions, the demand for effective asphalt adhesion promoters is expected to remain strong. The global market for asphalt adhesion promoters is expected to experience steady growth due to the ongoing need for resilient road surfaces and the expansion of transportation networks. Urbanization, road rehabilitation, and environmental concerns will continue to drive the demand for effective adhesion promoters.
