The global Asphalt Content Tester market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Asphalt content tester uses advanced infrared technology to measure the bitumen content in the asphalt mixture. The principle of the asphalt content tester: the hot mix asphalt mixture sample is heated and burned by infrared rays, and the asphalt is fully and completely burned without affecting the gradation analysis of the aggregate. The asphalt content tester combines advanced combustion technology with a sophisticated weighing system, continuously measures the loss of asphalt weight during the combustion process, and automatically displays the percentage of asphalt in the mixture. After combustion, the remaining aggregates can be screened out for gradation analysis.
