Aspherical Glass Mold Lenses are high-precision optical components formed by molding optical glass into an aspherical shape under high temperature using a precision glass molding process. Unlike traditional spherical lenses, aspherical lenses are designed to correct optical aberrations more effectively, enhance image quality, and reduce the number of components in an optical system—resulting in more compact and lightweight designs. Made from optical glass, these lenses offer excellent thermal stability, scratch resistance, and high light transmittance. They are widely used in digital cameras, smartphone lenses, automotive cameras, laser systems, medical devices, and optical communication equipment. Thanks to the molding technique, these lenses achieve high accuracy and consistency in mass production, delivering superior optical performance while maintaining cost efficiency. Aspherical Glass Mold Lenses have become a vital component in modern precision optical systems.
