Astaxanthin microcapsule beadlets are a form of astaxanthin, which is a naturally occurring carotenoid pigment found in various marine organisms. Astaxanthin is known for its powerful antioxidant properties, which can help protect cells from damage caused by free radicals. Microcapsule beadlets are tiny spherical structures that encapsulate the astaxanthin, allowing for controlled release and improved stability. This encapsulation helps protect the astaxanthin from degradation due to factors such as light, heat, and oxidation, ensuring its potency and effectiveness when consumed as a supplement or used in various applications such as food, cosmetics, and animal feed. Astaxanthin microcapsule beadlets are often used in dietary supplements due to their antioxidant benefits, which may support overall health and well-being, including skin health, eye health, cardiovascular health, and exercise performance, among other potential benefits.

The global Astaxanthin Microcapsule Beadlets market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
