Asthma is a chronic respiratory condition that affects millions of people around the world. Aerosol drug delivery is the first line administration route in asthma management, and metered dose inhalers (MDIs) are the most common type of inhalers used in asthmatic conditions. However, poor inhalation techniques have led to poor control of asthma. Valve holding chambers/spacers are designed to counter the problem. A spacer, usually attached with an MDI, is an external device that provides better drug delivery by increasing inhalation and actuation.

The global Asthma Spacers market size is projected to grow from US\$ 1158.9 million in 2023 to US\$ 1446.3 million in 2030; it is expected to grow at a CAGR of 3.2% from 2024 to 2030.
