According to our LPI (LP Information) latest study, the global Astronomical Telescope market size was valued at US\$ 161.6 million in 2023. With growing demand in downstream market, the Astronomical Telescope is forecast to a readjusted size of US\$ 242.8 million by 2030 with a CAGR of 6.0% during review period.

The research report highlights the growth potential of the global Astronomical Telescope market. Astronomical Telescope are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Astronomical Telescope. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Astronomical Telescope market.

Astronomical telescope is an optical instrument used to view heavenly bodies such moon, stars, planets and distant objects. Astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of objective. It is also a combination of two lenses.

For the telescopes with retail price below 300 \$/unit, they are generally sold with a bracket. Brackets for this level of telescopes are generally manual operated, they are low-cost and won't have big influence on the total cost of a telescope. But for telescopes of high-end, the cost of electric bracket or mount are quite high, these

brackets or mounts are generally sold as accessories.

In this report, we mainly account the cost and price of telescopes, but bracket or mount not included.

The global key producers of astronomical telescopes are Synta Technology (Celestron), JOC, Takahashi, Bosma, Vixen Co, etc. The largest producer is Synta Technology (Celestron), with about 50% market share. At the consumption level, North America has the the largest market with a share of 35%. In terms of product categories, refracting telescopes have the largest market share with 46%, followed by reflector telescopes with 40%. In terms of applications, 50% of the market share is for personal use and 35% for educational institutions.
