An asymmetrical paddle refers to a design in which one side of the paddleboard paddle is different from the other side in terms of shape, thickness, or rake. This deviation from a symmetrical design is intended to provide advantages in specific conditions, such as increased power, better control, or optimized directional stability. In windsurfing, for instance, an asymmetrical paddle can aid in harnessing the wind more effectively. In kayaking, it may help in achieving better manoeuvrability. The paddle's design can also be tailored to the paddler's technique, body type, or the type of water they navigate, such as flat water versus whitewater rapids.
