## Abstracts

The global Asymmetrical Silicon Controlled Rectifier (ASCR) market size is predicted to grow from US$ 557 million in 2025 to US$ 748 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Asymmetric thyristor is a specially designed semiconductor device belonging to the thyristor family. Its core feature is that the forward blocking voltage (VDRM/VRRM) is asymmetric to the reverse blocking voltage (VR), that is, the forward and reverse voltage withstand capabilities are different. This asymmetry gives ASCR a unique advantage in specific application scenarios.
