According to our LPI (LP Information) latest study, the global Asynchronous Motor market size was valued at US\$ 10700 million in 2023. With growing demand in downstream market, the Asynchronous Motor is forecast to a readjusted size of US\$ 18450 million by 2030 with a CAGR of 8.1% during review period.

The research report highlights the growth potential of the global Asynchronous Motor market. Asynchronous Motor are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Asynchronous Motor. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Asynchronous Motor market.

Asynchronous motor, also called induction motor, is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. Asynchronous motor therefore does not require mechanical commutation, separate-excitation or self-excitation for all or part of the energy transferred from stator to rotor. Asynchronous motor's rotor can be either wound type or squirrel-cage type.

Three-phase squirrel-cage asynchronous motors are widely used in industrial drives because they are rugged, reliable and economical. Single-phase asynchronous motors are used extensively for smaller loads, such as household appliances like fans.

The major players in global Asynchronous Motor market include TECO, Emerson, Regal-Beloit, etc., and the market concentration rate is low. North America and Europe

are main markets, they occupy over 50% of the global market. Three-phase asynchronous motor is the main type, with a share about 80%. Engineering And Manufacturing Industry and Logistics Industry are main applications, which hold a share about 60%.
