Atmospheric and Vacuum Distillation Unit is a core equipment in the oil refining industry, consisting of two parts: atmospheric distillation and vacuum distillation. It is mainly used for the preliminary processing and separation of crude oil. After the crude oil is pre-treated by electrical desalination and dehydration in this unit, it is subjected to distillation under both atmospheric and vacuum conditions, using the different boiling points of various hydrocarbon components to separate and obtain light oil products such as gasoline, kerosene, and diesel, as well as heavy components such as lubricant base oil and residual oil.

United States market for Atmospheric and Vacuum Distillation Unit is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Atmospheric and Vacuum Distillation Unit is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
