The global Atmospheric Pressure Plasma Machine market size is predicted to grow from US\$ 148 million in 2025 to US\$ 220 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

An Atmospheric Pressure Plasma Machine (also known as an AP Plasma system) is an industrial device that generates plasma—a highly reactive, ionized gas—at standard atmospheric pressure. Unlike vacuum plasma systems, it does not require a sealed chamber, allowing it to be integrated directly into automated production lines. It works by using high-voltage, high-frequency energy to ionize a process gas (usually compressed air, oxygen, or nitrogen), creating a 'cold' plasma flame. This flame is used to clean, activate, or etch the surfaces of materials like polymers, metals, and glass to significantly improve their surface energy and adhesion properties for subsequent bonding, printing, or coating processes. In 2025, global Atmospheric Pressure Plasma Machine production reached approximately 15000 units and average price was 10000 usd.

The core manufacturers of global Atmospheric Pressure Plasma System include PVA TePla, Plasmatreat, Diener Electronic, Sekisui Chemical, Tantec and AcXys Technologies, etc. The top five manufacturers account for approximately 36% of the global share.
