Abstracts

The global Atmospheric Water Generator (AWG) market size is predicted to grow from US\$ 332 million in 2025 to US\$ 700 million in 2032; it is expected to grow at a CAGR of 11.4% from 2026 to 2032.

Atmospheric water generator (AWG) can generate water from the air. It extracts water from the humid air and condense the water from gas phase to liquid phase. It can also filtrate out the dust, bacteria and other particles in the air to obtain clean water. In addition to produce water from the air, it can also be used as a water purification method by connecting the AWG to an external municipal water source.

The gross profit margin in this industry is around 30%.

Market Driver

Global Water Scarcity: The most powerful driver. Population growth, industrialization, and unsustainable agricultural practices are depleting traditional freshwater sources (aquifers, rivers, lakes). AWGs offer a decentralized, alternative source that is not dependent on these stressed hydrological systems.

Deteriorating Water Quality & Infrastructure: In many regions, even where water is available, aging pipes and contamination (e.g., PFAS, heavy metals, agricultural runoff) make tap water unsafe. AWGs produce high-purity water on-site, bypassing contaminated sources and infrastructure.

Climate Change Impacts: Climate change is exacerbating droughts, making rainfall patterns unpredictable, and accelerating glacial melt that feeds rivers. AWGs, which pull

water from the ever-present atmospheric humidity, provide a climate-resilient solution that is less vulnerable to specific regional drought conditions.

Rising Health & Wellness Awareness: Consumers are increasingly aware of contaminants in water and the environmental impact of single-use plastic bottles. AWGs cater to the demand for clean, mineralized, and plastic-free drinking water at home or in offices.

Military & Emergency Response Needs: AWGs are invaluable for remote military operations, disaster relief (e.g., after hurricanes or earthquakes when infrastructure is destroyed), and humanitarian missions where secure, immediate water supply is critical and logistics are challenging.
