The global Atomic Emission Detector(AED) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Atomic emission detector (AED) is a gas chromatography detector that uses plasma as the excitation light source. The working principle of AED is based on atomic emission spectrometry, which uses plasma as an excitation light source to atomize the measured components entering the detector. The atoms are excited to the excited state, then transition to the ground state, and emit an atomic spectrum. Qualitative and quantitative analyzes are performed based on the wavelength and intensity of these line spectra.
