The global Atomic Force Microscopy Probes market size is predicted to grow from US\$ 240 million in 2025 to US\$ 290 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Atomic-force microscopy (AFM) or scanning-force microscopy (SFM) is a type of scanning probe microscopy (SPM), with demonstrated resolution on the order of fractions of a nanometer, more than 1000 times better than the optical diffraction limit. The information is gathered by 'feeling' or 'touching' the surface with a mechanical probe. An AFM probe has a sharp tip on the free-swinging end of a cantilever that is protruding from a holder. The dimensions of the cantilever are in the scale of micrometers. The radius of the tip is usually on the scale of a few nanometers to a few tens of nanometers.

The major players in global AFM Probe market include NanoWorld AG, Bruker, etc. The top 2 players hold over 70% of global shares. North America and Europe are main markets, they occupy about 80% of the global market. Silicon AFM Probes is the main type, with a share over 50%. Materials is the key application, which hold a share over 50%.
