ATR-FTIR microscope, the full name is attenuated total reflectance-Fourier transform infrared microscopy, that is, attenuated total reflectance-Fourier transform infrared microscope. It is a microanalytical instrument that combines attenuated total reflection technology and Fourier transform infrared spectroscopy. It can non-destructively analyze the chemical composition and structure information of solid, thin film or tiny samples. The advantage of ATR-FTIR microscope is its high sensitivity and spatial resolution, which can realize chemical imaging of samples in micron and even nanometer scale, and it can be widely used in the fields of material science, biomedicine, pharmaceuticals, polymer science, criminal identification, etc., especially excellent in analyzing chemical compositions of samples on the surface or in thin layers. It is especially good at analyzing the chemical composition of the surface or thin layer of samples.
