Atropine eye drops have been shown safe to use in children when used as prescribed. While atropine has potential for causing toxic effects if taken by mouth, it is greatly diluted when formulated into eye drops. Medication safety is very important - if a young child accidentally swallows a bottle of atropine eye drops this can have very serious side effects.

The low concentrations of atropine used in myopia management have far less side effects for long term use, and have proven to be safe and effective for slowing myopia progression in children from age 4 to 14 at the start of treatment, and for up to two to three years. Amongst these lower concentrations, atropine 0.05% currently appears to be the most effective, with minimal side effects.
