Attic Power Ventilators are motorized fans installed in the attic to help regulate temperature by expelling hot air and bringing in cooler outside air. These ventilators are typically controlled by a thermostat, activating when the attic reaches a set temperature, usually in the warmer months. By removing excess heat from the attic, they prevent heat buildup, reduce the strain on air conditioning systems, and lower overall cooling costs. Attic power ventilators also help protect roofing materials from damage caused by excessive heat and moisture, improving the longevity of the roof. They are often used in conjunction with passive ventilation systems to enhance airflow and maintain a balanced attic environment.
