The global Attrition Cells market size is predicted to grow from US\$ 3327 million in 2025 to US\$ 4322 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

Attrition cell is a machine that scrubs minerals mainly through the action of slurry particles colliding with each other.

In mining and quarrying, friction scrubbers are used to clean minerals and remove unwanted substances. In the metallurgical industry, they are used in ore beneficiation and iron removal processes. The recycling industry uses friction scrubbers to separate and clean materials such as plastic and glass. In the construction industry, these scrubbers are used for cleaning and preparing construction materials. They are also used in other industries where material cleaning or removal of impurities is required. The global friction scrubber market has grown significantly, with technological advancements and increasing consumer demand being the key drivers for this growth. One of the key factors contributing to the growth of the friction scrubber market is the rising number of applications and growing awareness about the benefits of using friction scrubbers. Rise in e-commerce and online shopping as more consumers are turning to the internet for shopping has also played a role in the growth of the market.
