An augmented reality software development kit, or AR SDK, allows developers to build digital objects that appear to blend into the real world. An AR SDK is crucial to any business that creates AR experiences. These tools offer functions such as 3D object tracking, image recognition, visual SLAM (simultaneous localization and mapping), multi-tracking, and more, which allow developers to produce digital images. AR engineers can utilize these SDKs to develop mobile apps, various CAD platforms, marketing experiences, and more. These SDKs are typically intended for specific frameworks and hardware; however, some AR SDKs can be supported across multiple systems, creating more flexibility.
