Austempering is a heat treatment process used to enhance the mechanical properties of ferrous metals, particularly steel and iron alloys. It involves heating the material to a specific temperature range, holding it at that temperature for a predetermined time, and then cooling it in a controlled manner. Toughness and ductility are improved due to the presence of retained austenite and ausferrite microstructure. Enhanced wear resistance and fatigue properties compared to traditional quenched and tempered materials.

The global Austempering market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
