The report requires updating with new data and is sent in 48 hours after order is placed.

Austenitic-Ferritic Duplex Stainless Steel have a ferritic-austenitic microstructure, with a phase balance of approximately 50% ferrite and 50% austenite. They combine many of the beneficial properties of ferritic and austenitic stainless steels. The duplex microstructure contributes to the high mechanical strength and high resistance to stress corrosion cracking.

The high strength of duplex steel grades is also a result of alloying with nitrogen. Other characteristic properties of duplex steel grades include good abrasion and erosion resistance, good fatigue resistance, high-energy absorption and low thermal expansion.
