Auto-darkening welding helmets have a filter lens made of a special type of liquid crystal that's powered through rechargeable batteries, solar power, or a combination of the two. When activated, the helmet can detect changes in light and reduce the auto darkening filter (ADF) shade to fit the situation. The helmet's sensors can tell different kinds of light apart, so you don't have to worry about natural light or light bulbs setting it off or not being able to pick up on the welding arc.
