An auto darkening welding helmet is a type of protective headgear worn by welders that automatically adjusts the level of darkness of the lens based on the intensity of the welding arc. This helps to protect the welder's eyes from harmful ultraviolet and infrared rays emitted during the welding process. The helmet allows the welder to have clear visibility while welding, while also providing protection and reducing the risk of eye strain and long-term damage.

The global Auto Darkening Welding Helmet market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
