The auto-iris motorized zoom lens is an advanced optical device widely used in surveillance cameras, video cameras and industrial vision systems. This lens combines the two functions of electric zoom and automatic aperture control to provide users with convenient operation experience and high-quality imaging effects. The electric zoom function allows users to remotely adjust the focal length through the remote control or software interface to achieve a smooth transition from wide angle to telephoto, which is very suitable for application scenarios that require flexible viewing angles. The automatic aperture technology automatically adjusts the aperture size of the lens according to changes in ambient light to ensure that the image always maintains the best exposure level.

Global Auto-iris Motorized Zoom Lens key players include Tamron, Bosch Security, Fujifilm and Hanwha Techwin, etc. Global top four manufacturers hold a share over 45%.

The largest consumer market is Asia-Pacific, has a share about 55%, followed by North America and Europe, with around 20% and 18% market share respectively.

In terms of product, Below 300mm is the largest segment, with a share over 40%. And in terms of application, the largest application is City Security followed by Border
