The autofeed collated screwdriver is an electric tool that integrates automatic screw feeding and efficient tightening functions. It is widely used in high-frequency assembly operations such as carpentry, light steel keels, gypsum board installation and floor laying. The tool uses a pre-installed screw chain (Collated Screw Strip) to achieve continuous nail supply. During the operation, each time a screw is tightened, the next one is automatically delivered to the screw head position, without the need for manual nailing, greatly improving construction efficiency and consistency. It is equipped with an automatic feeding mechanism, depth controller and adjustable speed motor, which are suitable for screws of different lengths and specifications, and support the adjustment of nail insertion depth and torque setting. Some models also have angle adjustment, chain change quick installation and anti-slip screwdriver head system. Compared with traditional screwdrivers, this device is easier to operate and saves labor. It is especially suitable for large-area, repetitive and rapid installation tasks. It is an efficient assembly tool in modern building assembly and interior construction.

United States market for Autofeed Collated Screwdriver is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
