The global Autofocus Digital Microscope market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An autofocus digital microscope is a microscope that combines a traditional optical microscope with advanced digital imaging technology and has an autofocus function. The autofocus function greatly simplifies the operation of the microscope. Users do not need to manually adjust the focus knob repeatedly, saving time and energy. Especially when observing multiple samples or needing to quickly switch the observation position, autofocus can quickly and accurately obtain a clear image. In addition to the autofocus function, digital microscopes also have a variety of functions, such as digital magnification, image storage, measurement and analysis, etc. Users can zoom in, zoom out, annotate, measure, and perform other operations on the image as needed, which is convenient for in-depth analysis and research of the sample. And the observed image can be saved in picture or video format for subsequent reference and sharing. It is widely used in scientific research, teaching, medicine, industry and other fields.
