The global Automated Air Carbon Arc Gouging System market size is predicted to grow from US\$ 142 million in 2025 to US\$ 219 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Air carbon arc gouging is a thermal cutting process of removing or severing metal by heat from a carbon arc. The process uses a carbon/graphite electrode, standard power source, and compressed air. The intense heat arc produced between the tip of the electrode and the metal workpiece melts and cuts the metal. The air carbon arc gouging technique is used to remove any old or defective welds for repairing or dismantling equipment.

Metal cutting equipment refers to the equipment that makes the metal material be cut into the desired shape by mechanical operation, which is an indispensable basic processing equipment in modern industrial production. With the acceleration of infrastructure construction and the progress of social development, there is an increasing demand for metal cutting equipment. According to our research, the global metal cutting equipment market reached USD 62.4 billion in 2022.
