Automated antimicrobial susceptibility testing is extensively used to achieve minimum inhibitory concentration (MIC) results using an antimicrobial susceptibility testing system, which offers flexible, customizable testing options to accommodate laboratories of all sizes. Antimicrobial susceptibility testing (AST) aims to ensure that suitable antibiotics are prescribed to individuals by monitoring inhibition zone of antibiotics and emergence of resistant pathogens in infected individuals. Information on local patterns of antimicrobial susceptibility can be collected using antimicrobial susceptibility testing, so that policies guiding the therapy can be based on current data on local resistance trends or institutional antibiogram.
