The global Automated Conveyor Sorting Systems market size is predicted to grow from US\$ 16710 million in 2025 to US\$ 28060 million in 2031; it is expected to grow at a CAGR of 9.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Automated Conveyor Sorting Systems are the mission-critical conduits for transporting, directing and routing product flows through busy manufacturing and fulfillment environments. While conveyors are essential for moving product from one area of a facility to the next, sortation systems separate products for induction into individual lanes typically associated with an outbound destination. Various types of Conveyor Sortation System are often connected to comprise a fully functioning material handling solution.

As for the development in Chinese market, On the one hand, the development of e-commerce has brought about the explosion of express delivery services, which has greatly increased the operation volume and complexity of sorting operations, and the defects of manual sorting have been magnified, thereby inspiring the needs of express companies to transform and upgrade through the deployment of intelligent sorting. On the other hand, the increase in the utilization rate of electronic face orders, the successful fundraising of express companies, and the rapid decline in the price of smart sorting equipment have all provided external conditions for the popularization of smart sorting. Considering internal demand and external conditions, the number of installations of intelligent sorting equipment in the express delivery field has exploded

rapidly in the past two years.
