A coverslipper machine is a device that automatically places a cover glass or coverslip film on microscope slides. This glass or film layer preserves the sample and prevents damage. Without a coverslipper, technicians must place coverslips on the slides by hand. Coverslippers are used to automate and simplify the monotonous and often lengthy task of covering microscope slides. They are ideal for both medical and clinical laboratories, offer an increase in throughput by automating coverslipping, and can perform both wet and dry coverslipping.
