Automated Fiber Placement System for Wind Energy is an advanced composite manufacturing system designed for wind turbine blades and large load-bearing composite structures. By integrating multi-axis coordinated motion, high-precision control, and automated fiber handling, it enables continuous, accurate fiber placement and directional layup on complex geometries. Its advantages include high layup accuracy, high material utilization, and strong structural consistency, making it well suited to the trend toward larger and more industrialized wind energy manufacturing. In 2025, the industry's capacity utilization rate was about 50%, and the average gross margin was approximately 35%. In 2025, production reached 500 units at an average price of US\$2.2 million per unit. Upstream, the supply chain mainly involves high-precision servo motors and linear guide systems, with representative suppliers including Siemens, Bosch Rexroth, THK, and HIWIN. The midstream focuses on system integration, motion control tuning, placement head design, and process optimization, which together determine system accuracy and operational stability. Downstream applications are mainly concentrated in offshore wind power and onshore wind power, with representative customers including Vestas, Siemens Gamesa, GE Vernova, Goldwind, and MingYang Smart Energy.
