An automated foam-in-place packaging system is an integrated packaging equipment that combines automation and intelligence. It mainly consists of a foaming agent supply system, mixing system, molding mold or conveying device, control system and detection and feedback system. The system precisely mixes the foaming agent and other materials in the mixing system. Then, the foaming liquid is evenly sprayed or poured onto the product surface or into the gap between the product and the packaging container through a nozzle or pouring device, and solidifies to form a protective layer. Controlled by a program, it can adjust parameters according to product requirements, achieving customized packaging with high efficiency, energy-saving and stable quality, thus reducing labor costs and protecting products during transportation and storage.

United States market for Automated Foam-in-place Packaging System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
