According to this study, the global Automated Garments on Hanger (GOH) Solutions market size will reach US\$ 2938 million by 2031.

An automated hanger garment solution is a specialized warehouse storage solution designed for the efficient storage and handling of garments in the apparel industry. An automated hanger garment solution eliminates the need for workers to walk around to find garments, significantly reducing travel time and manual labor. This is because the garments are stored on mobile transport carts or automated tracks. Delivering the garments to team members allows for quick retrieval and significantly increases order fulfillment speed. Automated hanger garment systems are available in two main configurations. The static storage configuration is the most basic GOH system. Its overhead tracks and hangers provide a simple way to store garments—think of it as a larger-scale hanging closet. Workers manually store and retrieve garments as needed. This is ideal for situations where space optimization is a priority but large volumes do not need to be moved. A dynamic storage hanger system prioritizes high throughput. It includes the basic static storage components and adds motorized carts that move along tracks. These carts enable efficient movement of garments between different warehouse areas, such as picking stations or staging areas. This type is ideal for handling busy warehouses that are constantly moving garments in and out.
