The global Automated Harvesting Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Automated harvesting systems are advanced technologies used to automate the process of harvesting crops in agriculture. These systems use various sensors, robotics, and artificial intelligence (AI) to identify and selectively harvest crops with high precision and efficiency.

Automated harvesting systems are designed to overcome some of the limitations of manual harvesting, such as labor shortages, high labor costs, and limitations in the availability of skilled labor. These systems can also improve crop quality and reduce waste by selectively harvesting only the crops that are ripe and ready for harvest.
