Automated Heated Microplate Sealer is an efficient laboratory equipment specially designed to automatically adhere heat-sealing film to the surface of a microplate. The device firmly seals the film material on the microplate through precise heating and pressure control, ensuring that each hole can be effectively sealed. This automated process improves the consistency and speed of packaging and reduces human error. It is widely used in biomedical research, drug screening and clinical trials to protect the stability of samples and prevent volatilization, leakage or contamination of samples. The use of the automated microplate heat sealer not only improves experimental efficiency, but also ensures the accuracy of experimental results.
