The global Automated Microwave Digestion System market size is predicted to grow from US\$ 1815 million in 2025 to US\$ 2194 million in 2032; it is expected to grow at a CAGR of 2.8% from 2026 to 2032.

The global production of automated microwave digestion systems reached approximately 98.5 thousand units in 2024, with an average selling price of \$18.2 thousand per unit. An automated microwave digestion system is a device used for laboratory sample preparation. It utilizes microwave heating technology to rapidly and thoroughly decompose various complex samples (such as food, environmental samples, pharmaceuticals, and biological tissues) in a sealed, high-pressure environment, preparing them for subsequent elemental analysis (e.g., by ICP-OES/MS). The system automates the entire process from acid addition, digestion, cooling, to dilution, significantly improving the efficiency, safety, and reproducibility of sample preparation. It is widely applied in environmental monitoring, food safety, pharmaceuticals, and scientific research.

The global automated microwave digestion system market maintains steady growth, primarily driven by increasingly stringent environmental monitoring standards, tightening food safety regulations, and growing laboratory automation demands. Technological evolution demonstrates trends toward intelligentization, high-throughput, and environmental friendliness. Leading manufacturers integrate robotic sample handling systems for full-process automation, develop low-acid consumption methods and exhaust neutralization devices to reduce environmental pollution, and incorporate IoT technology for remote monitoring and predictive maintenance. The competitive landscape is dominated by established international scientific instrument companies, while domestic enterprises continue to expand market share through cost-effective

advantages and customized services. Future industry competition will focus on throughput improvement, intelligentization levels, and consumables cost control.
