## Abstracts

The global Automated Prescription System market size is predicted to grow from US\$ 2794 million in 2025 to US\$ 6383 million in 2032; it is expected to grow at a CAGR of 12.9% from 2026 to 2032.

An Automated Prescription System integrates electronic prescription management, AI-based clinical decision support, automated dispensing machinery, drug–drug interaction checking and pharmacy workflow automation to reduce medication errors and improve operational efficiency. Upstream components include barcode/RFID sensors, robotic dispensing arms, imaging modules and clinical drug databases; midstream vendors develop decision-support algorithms, user interfaces, dispensing hardware and compliance platforms; downstream customers include hospitals, retail pharmacy chains, outpatient centers, telemedicine providers and chronic-disease management networks.

The automated prescription market is expanding rapidly due to rising medication safety standards, prescription digitization and AI-assisted verification. As pharmacies and hospitals move toward fully automated workflows, systems integrating robotic dispensing, clinical rules engines and cloud-based prescription validation will dominate future adoption. Continuous regulatory pressure to reduce medication errors will maintain strong growth through 2031.
