3D Excavator Systems allow ophthalmology practices to quickly and easily determine a patient's prescription. Today's digital refraction systems increase efficiency, decrease errors, and come with a multitude of features like EMR integration.

Automated Refraction System is a device for optometry of glasses through digital image acquisition and processing technology. At present, the Automated Refraction System market structure is gradually showing a situation of 'few large factories and many small factories'. The high-end market has a large market share of digital refractors, and the low-end market is still in its infancy.

Automated Refraction System can perform optometry more accurately and quickly, reduce eye fatigue of users, and gradually replace traditional optometry methods. With the rapid development of artificial intelligence and Internet of Things technology, people's demand for Automated Refraction System continues to grow. The Automated Refraction System can not only perform high-quality optometry, but also store data in the cloud for query and analysis by doctors and patients. The market for Automated Refraction System is expanding to a wider range of applications, such as universal vision care, pupil analysis, etc.
