The global Automated SPECT System market size is predicted to grow from US$ 1799 million in 2025 to US$ 2609 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

An Automated SPECT (Single Photon Emission Computed Tomography) System is a medical imaging device that captures three-dimensional gamma-ray images of internal organs and tissues, integrating automated image acquisition, processing, and reconstruction to enhance diagnostic accuracy, efficiency, and workflow in nuclear medicine for cardiology, oncology, neurology, and bone imaging applications.

The automated SPECT system industry chain begins upstream with suppliers of scintillation crystals, photomultiplier tubes, CZT detectors, high-precision mechanical components, and imaging software, followed by midstream manufacturers and integrators who assemble detectors, gantry systems, automated patient handling, image reconstruction software, and quality control solutions, while downstream consists of hospitals, nuclear medicine centers, diagnostic imaging facilities, research institutes, and distributors that deploy SPECT systems for cardiac, oncology, and neurological applications, supported by maintenance, service contracts, and training programs, forming a global network linking high-tech component production, precision assembly, and advanced clinical imaging applications.

Ongoing and planned projects include expansion of automated SPECT manufacturing facilities in North America, Europe, and Asia-Pacific, development of CZT-based multi-detector and hybrid SPECT/CT systems for cardiology and oncology, collaborations between imaging system manufacturers and hospitals to pilot advanced automated acquisition and AI-assisted reconstruction, investments in compact and portable SPECT
