The global Automated Warehouse Sortation Systems market size is predicted to grow from US\$ 2256 million in 2025 to US\$ 4728 million in 2032; it is expected to grow at a CAGR of 11.2% from 2026 to 2032.

Automated warehouse sorting systems are intelligent material sorting equipment used in logistics warehousing, e-commerce, express delivery, and manufacturing supply chains. They are primarily used for the automatic identification, classification, conveying, and diversion of packages, boxes, pallets, and parts. A typical system consists of conveyor lines, cross-belt sorters, sliding block sorters, robotic handling units, vision recognition equipment, barcode/RFID scanning modules, warehouse management software, and a central control system. It can achieve high-speed and accurate sorting based on order information and logistics routes, significantly improving warehousing efficiency and reducing labor costs.

Automated warehouse sorting systems feature high throughput, low error rates, continuous operation, and intelligent scheduling, and are widely used in e-commerce warehouses, express delivery distribution centers, cold chain logistics, pharmaceutical warehousing, and automotive parts distribution centers. With the rapid growth of e-commerce, the advancement of smart logistics construction, and rising labor costs, automated warehouse sorting systems are developing towards AI intelligent scheduling, robot collaboration, multi-layer three-dimensional sorting, and digital twin management, and have broad market prospects in the fields of smart logistics and industrial supply chain automation.
