An automatic air-assisted airless spray gun is an automated spraying device that combines air-assisted and airless spray technologies, primarily used for efficient large-area coating in industrial applications. The gun uses a high-pressure pump to force the paint directly through the nozzle, while a small amount of compressed air helps atomize the paint particles for even coverage on the target surface. Automatic air-assisted airless spray guns are known for their high application speed, uniform coating, and high paint utilization, making them widely used in automotive manufacturing, heavy industry, and construction.
