The automatic apple peeling, core removal and slicing machine is an advanced fruit processing equipment that can automatically complete multiple actions such as peeling, core removal (peeling or cutting the end) and slicing of apples. The automatic apple peeling, core removal and slicing machine uses mechanical principles and is controlled by PLC (programmable logic controller). The peeling knife can automatically follow the changes in the apple's appearance to perform peeling operations. The peeling thickness is adjustable to ensure less peeling fruit damage and high pulp utilization. After setting the relevant parameters and actions on the touch screen, put the apples into the hopper of the equipment, and the equipment automatically performs peeling, core removal and slicing operations. At the same time, the liquid in the color protection tank circulates and sprays the peeled apples to prevent them from oxidizing and turning black. It is mainly suitable for the processing of apples and other core fruits and vegetables. It is a necessary equipment for processing canned food, preserved fruits, dried fruits, fruit powder, jam, fruit cake, juice and other products.

The global Automatic Apple Peeling and Slicing Machine market size is projected to grow from US\$ 75.3 million in 2024 to US\$ 136 million in 2030; it is expected to grow at a CAGR of 10.4% from 2024 to 2030.
