In 2024, global Automatic backwash strainer production reached approximately 32800 units , with an average global market price of around US\$ 2100 per unit. Automatic backwash strainer is an intelligent filter device which can automatically clean the filter screen online and continuously supply fluid during cleaning. It mainly uses the system's own pressure or external power to automatically remove impurities intercepted by the filter screen without stopping, thus ensuring the long-term stable operation of the system.

The core demand of automatic backwash strainer mainly comes from the urgent requirements of industrial field to improve water resource utilization efficiency, ensure production continuity and meet increasingly strict environmental protection regulations. Its automatic cleaning characteristics without shutdown play a key role in industrial circulating water system, intelligent manufacturing and new energy. Future business opportunities closely revolve around technology upgrades and emerging application scenarios, embodied in intelligence (integrating IoT and AI algorithms for predictive maintenance), new material applications to improve durability, and expansion of filtration solutions in emerging industries such as hydrogen energy and carbon capture. At the same time, in the Asia-Pacific region, especially in the China market, driven by industrial upgrading and environmental protection policies, there is significant growth potential, providing broad space for relevant enterprises.

The annual production capacity of a single automatic backwash strainer production line

is typically 3,000-5,000 units per year, with a gross profit margin of around 28%.

The downstream consumption of automatic backwash strainer is as follows: electricity (32%), petrochemicals (26%), papermaking (21%), food processing (12%), and others (9%).
