Automatic Colony Counters is a high-tech product developed for microbial colony analysis and particle size detection. It uses its powerful software image processing function and scientific mathematical analysis method to analyze microbial colony analysis and particle size detection, with accurate counting and fast statistical speed. Automatic Colony Counters are used to estimate a liquid culture's density of microorganisms by counting individual colonies on an agar plate, slide, mini gel, or Petri dish.

According to the Segmentation of types, all the market of Automatic Colony Counters can be divided as follows: Benchtop Type and Compact Type. The first kind is Benchtop Type, it holds a comparatively larger share in global market, which accounts for above 90% . From the view of region, Europe have a larger market share which account for about 47%. The world TOP 5 players in the Automatic Colony Counters market are Interscience, Analytik Jena, IUL, AID GmbH, BioMerieux. These Top 5 companies currently account for more than 17% of the total market share and are expected to retain their dominating hold over the market during the forecast period.

Traditional bacterial counting methods require long-term cultivation and manual counting, which is inefficient and prone to errors. Automatic colony counters can realize automated bacterial counting, greatly saving time and labor costs, and improving work

efficiency and accuracy, so they are favored by the majority of users.

With the development of science and technology, the functions and performance of automatic colony counters are constantly improving. The new generation of products has higher accuracy, faster speed and wider application range, which can better meet the needs of users. In addition, the application of technologies such as artificial intelligence and machine learning has also continuously improved the intelligence level of automatic colony counters, further promoting the development of the market. With the improvement of people's living standards and the enhancement of health awareness, food safety, disease prevention and other issues have received increasing attention. Automatic colony counters can quickly and accurately detect the number of bacteria, helping people to better control disease transmission and food safety issues, so the market demand is increasing. With the continuous increase in scientific research and testing work, the workload of laboratories is also increasing. Automatic colony counters can provide fast and accurate counting results, reducing the time and labor cost of manual counting, so they may be favored by laboratory users.
