Automatic Computer Perimeter is an advanced and highly sophisticated ophthalmic examination device that represents the pinnacle of the combination of modern technology and medical science. It features a complex yet refined structure, incorporating a precise stimulus - generating mechanism and a highly sensitive response - detecting system. The stimulus - generating mechanism can automatically and accurately present various forms of visual stimuli to the patient's eyes according to preset programs. These stimuli include light spots or patterns with different brightnesses, sizes, and colors, covering a wide range from the central to the peripheral visual field. Meanwhile, the response - detecting system can quickly capture the slightest reactions of the patient upon perceiving the stimuli.
