According to this study, the global Automatic Container Handling Equipment market size will reach US\$ 2976 million by 2031.

Shipping containers revolutionized the movement of goods, driving change and efficiency throughout the global supply chain. The next revolution in container handling is the application of automation to operating the container terminal. At this time there are multiple automated container terminals in operation and more in development globally. The automation challenge has been in the part of the terminal where the containers are stacked, called the block. One end of the block services the ships being loaded and unloaded, and the other end services trucks and trains being loaded and unloaded.
